

It is very hard to express God's grace sometimes, by the present report I would like to thank my family in US California RANDY WILLIAMS & PAMELA WILLIAMS and Operation 29 11 staff to their kindness, compassion to change lives of million persons in AFRICA especially the DRC, truly I don't know where to start.

Truly we thank God to make this happen, and today we are harvesting the first result, and the impact is positive since February with 100\$ as a donation, we send seeds to Kampala the box with many varieties of seeds, according to our command, we plant to have an agriculture product shop this year, we were able to pay an Engineer, fertilizer...with donation from you God bless you one more this year 2018 saving our community...

The challenge at our side was to have a field in which we could start with the project, due to the distance and security in the area. Finally we decided to select families in charge of orphans, and we formulate a group of 12 families, we find a plot of one member.

#### Germination:

I gave a part of seeds to a team of our Baptist Church, unfortunately a following up wasn't daily and great part of seeds didn't appear. This step was difficult for this germination we did it at around 12 miles from the town, reason why we did the lobbying to find a plot near the market to Kiwanja, Rurshuru Territory North Kivu Province, for a period of six months.

Johnson appreciating onion germination

This guy was helping her uncle for I went to visit germination it was in August, reason why, orphans were involved, this guy is an orphan of dad and her mother, I mean total orphan, he related.

We did transplantation to a field, this step it wasn't easy due to its localization, near an old market, rubbers check in the ground, and construct a plot with old tins, to prevent goats access to our crops, we planted cabbages, onion, carrots, tomatoes.

Our strategies was to formulate a group composed by families which have orphans, after harvesting they can start an activities to prevent poverty in their family. As you can see on this picture the plot made in old tins, the space was divided into 4 groups this one planted tomatos

This women is the president of the group and she is harvesting

This is a result of an engagement for the team as an experience of the groups, it was time to train them, this coming year every group will look a place where he will be in an program of self-sufficient,we will provide for them seeds and expertise with an Agriculture Engineer.

Im thiking to created an agriculture materials shop, such as fertilizers, pumps and other products, that is a difficulties we are facing of as a challenge.

We did all our best to stop crops to be attacked by insects, even if it was in the dry season, God respond to our prayers, orphans are not staving this period, By God's grace this 2018 we wish to have a rotative micro finance for a group, for realize women are interested in this program,

During my supervision i was happy to meet the crops, according to their report the project succeeded so they looking for a large space.

The man in bleu T shirt is an agriculture Engineer, him and I time to time we where there every morning to meet the team.

May God openly to every one who made this happen. Wishing you a Merry Christmas and happy new year 2018
