

# Operation 29:11

*Restoring Hope... Changing Lives*

It was on Tuesday April 24<sup>th</sup> 2018 when I meet Maman THASI the Team Leader of a group of 15 persons, men and women, she was very happy to receive seeds, it was a pedagogic step in Agriculture with one Agriculture Engineer and two trainers from Goma University

She was very interested to participate at this pedagogic germination step, training, the guy with the hat is an Engineer in Agriculture at his side a student in our garden.

The first step is to prepare the plate band for germination

Preparing the plate band for germination, and groove delineated where we will put seeds, time to time we use fire ash to sterilize grooves before seeding

Groove mark before fire ash

fire ash used as grooves disinfecting

After sowing we have to cover seeds to avoid birds or fowl to eat it or to dissipate. Finish we put straw.

Straw to avoid rain to dissipate seeds and put different tab to distinguish varieties of seeds and date  
Activities done before my accident thank you for those who made this possible  
Thank you OPERATION 29:11 to made this possible. *JOHNSON KIPESSE*
